QUEUELESS

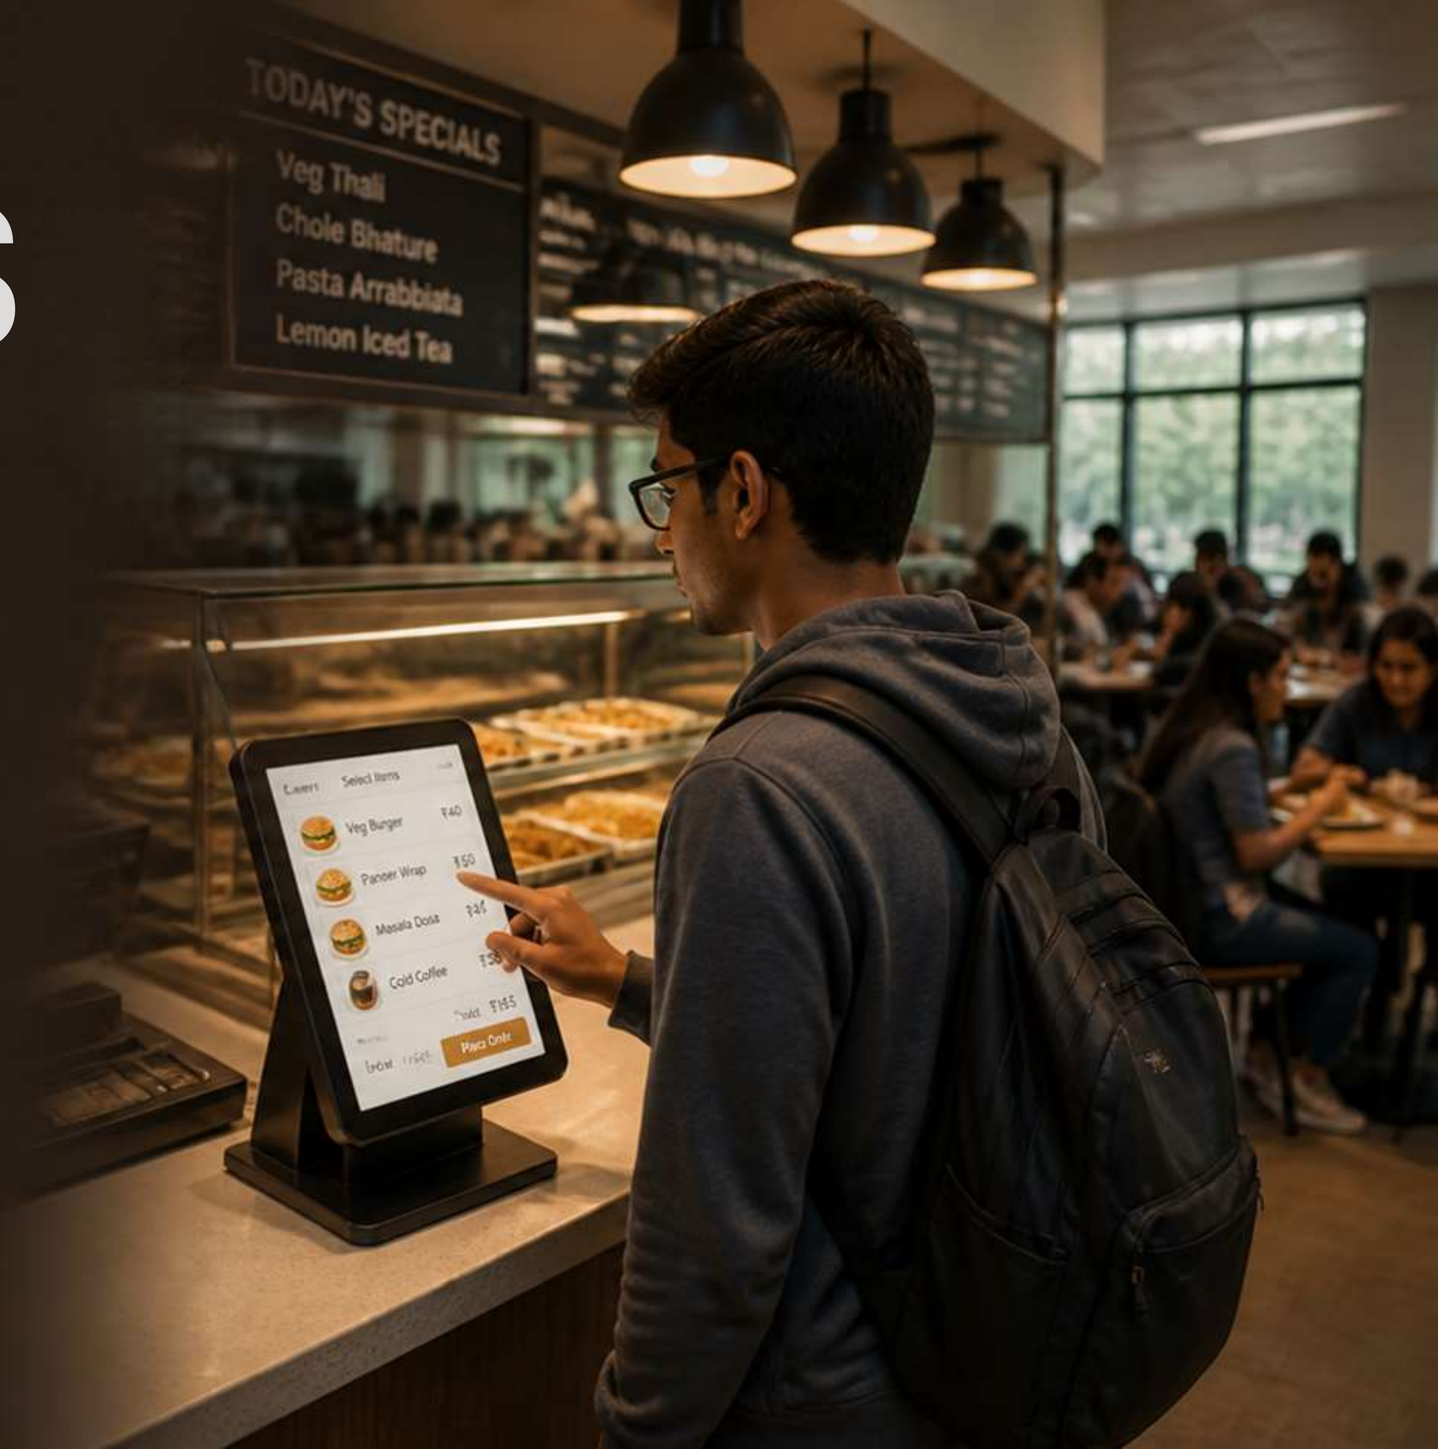

Seamless Ordering. Smarter Service.

College Canteen Queue
Management System

Team: Bytes

Department: Information Technology

College: Rajalashmi Engineering College

THE COST OF WAITING

Long queues consume student’s break time

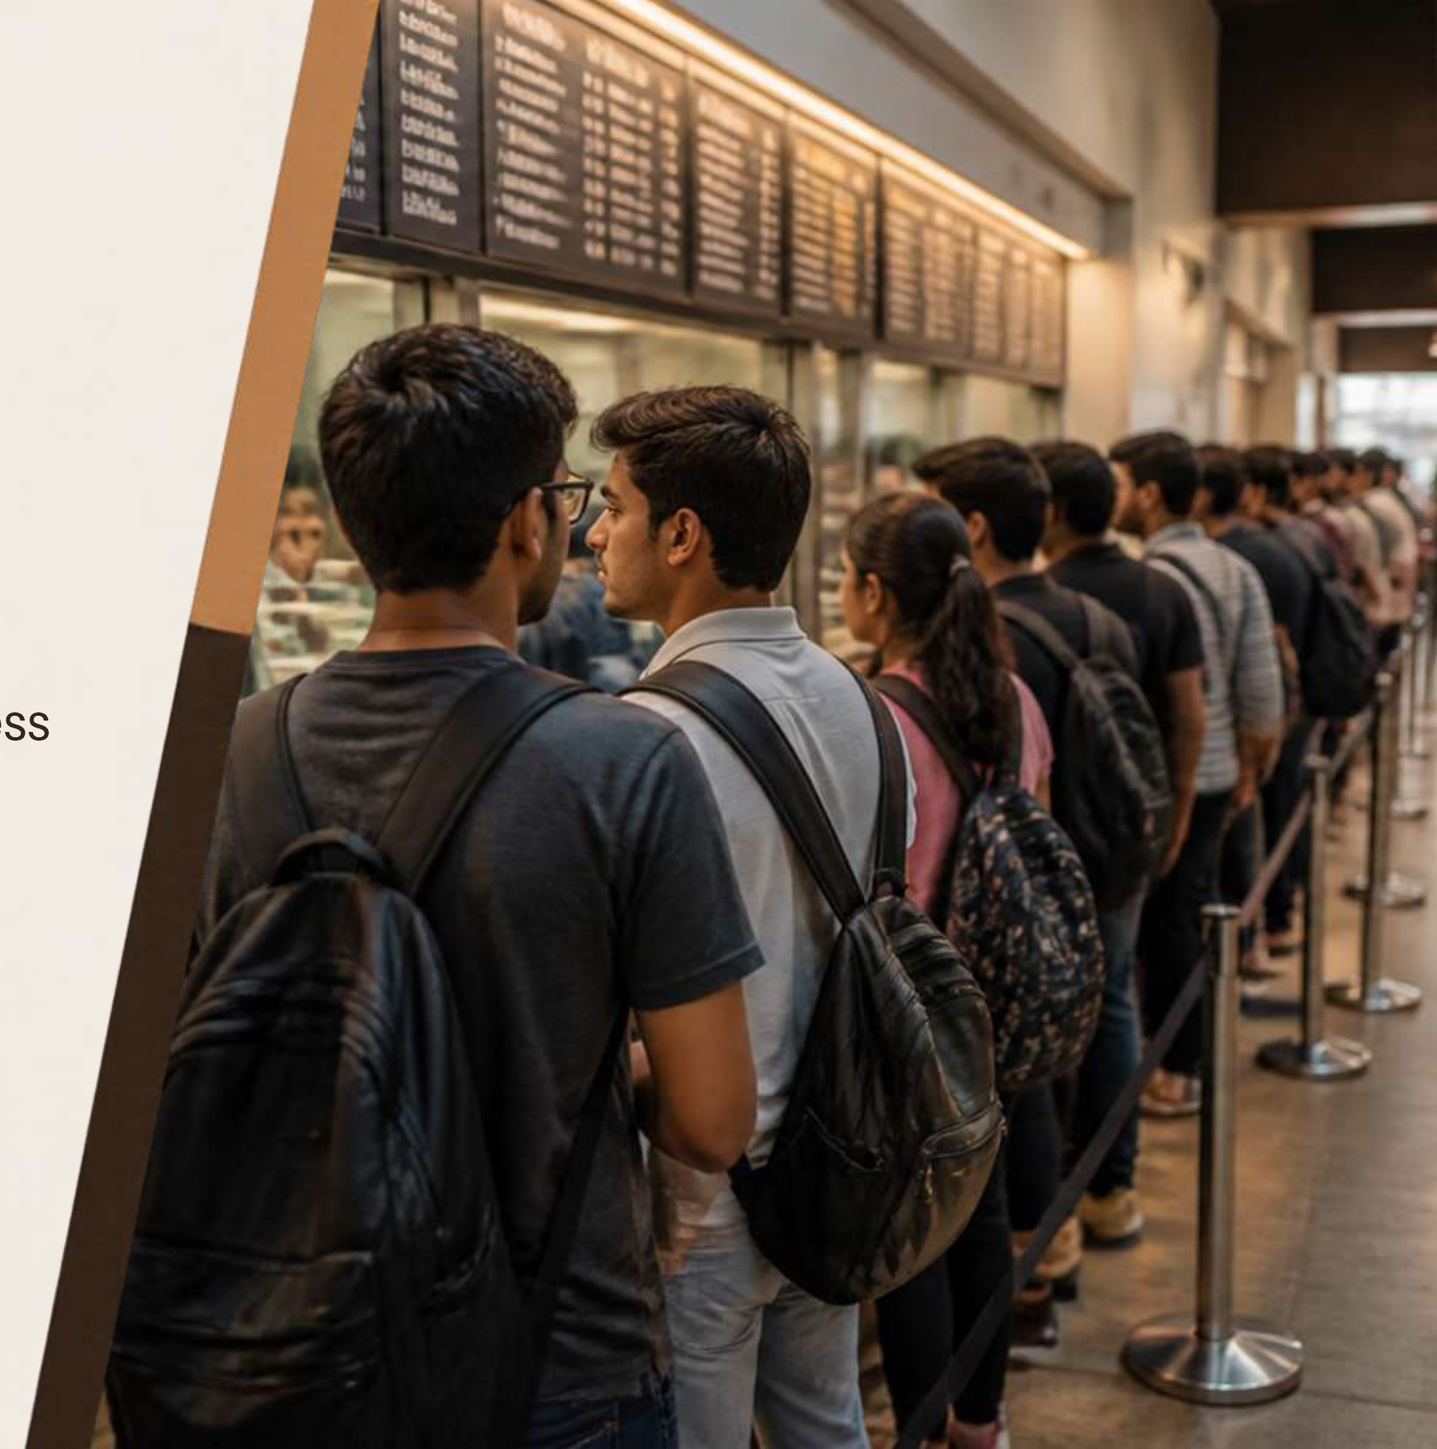

No clear information about preparation progress

Repeated counter checking

Manual order tracking is difficult for staff

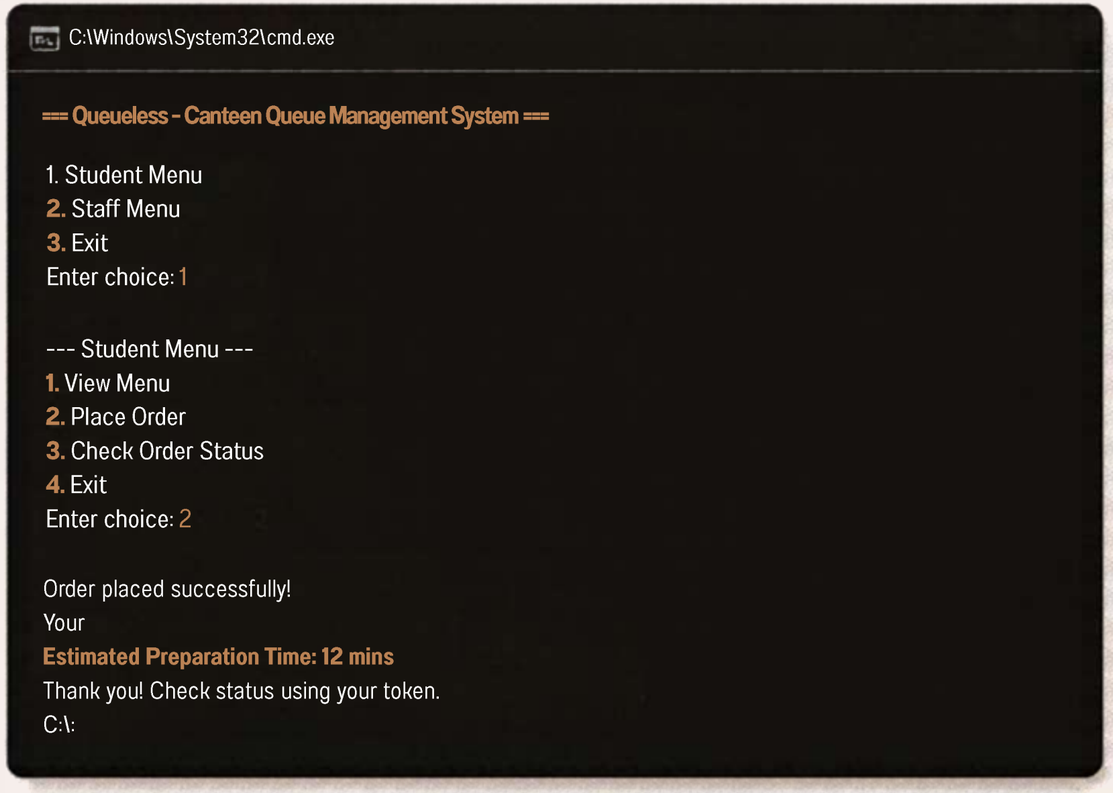

THE CORE PROBLEM

No organised ordering and tracking system

INTRODUCING QUEUELESS

A Java + MySQL mini project Command Line solution for smarter canteen queue management

STUDENT EXPERIENCE		STAFF CONTROL
Browse the canteen menu	→	View incoming student orders
Place orders and get a unique token		Update order status at every stage
See estimated preparation time	←	Mark orders READY
Check order status using your token		Mark orders COMPLETED

A SMARTER APPROACH TO CANTEEN MANAGEMENT

TRADITIONAL ORDERING	QUEUELESS APPROACH
Waiting in line to place orders	Place orders instantly through CMD
Orders without any unique identification	Every order gets a unique token
Repeated counter visits for status updates	Check order status using your token
Manual tracking with scattered records	Centralised MySQL records for accuracy

VS

ORDER LIFECYCLE

NEW → PREPARING → READY → COMPLETED

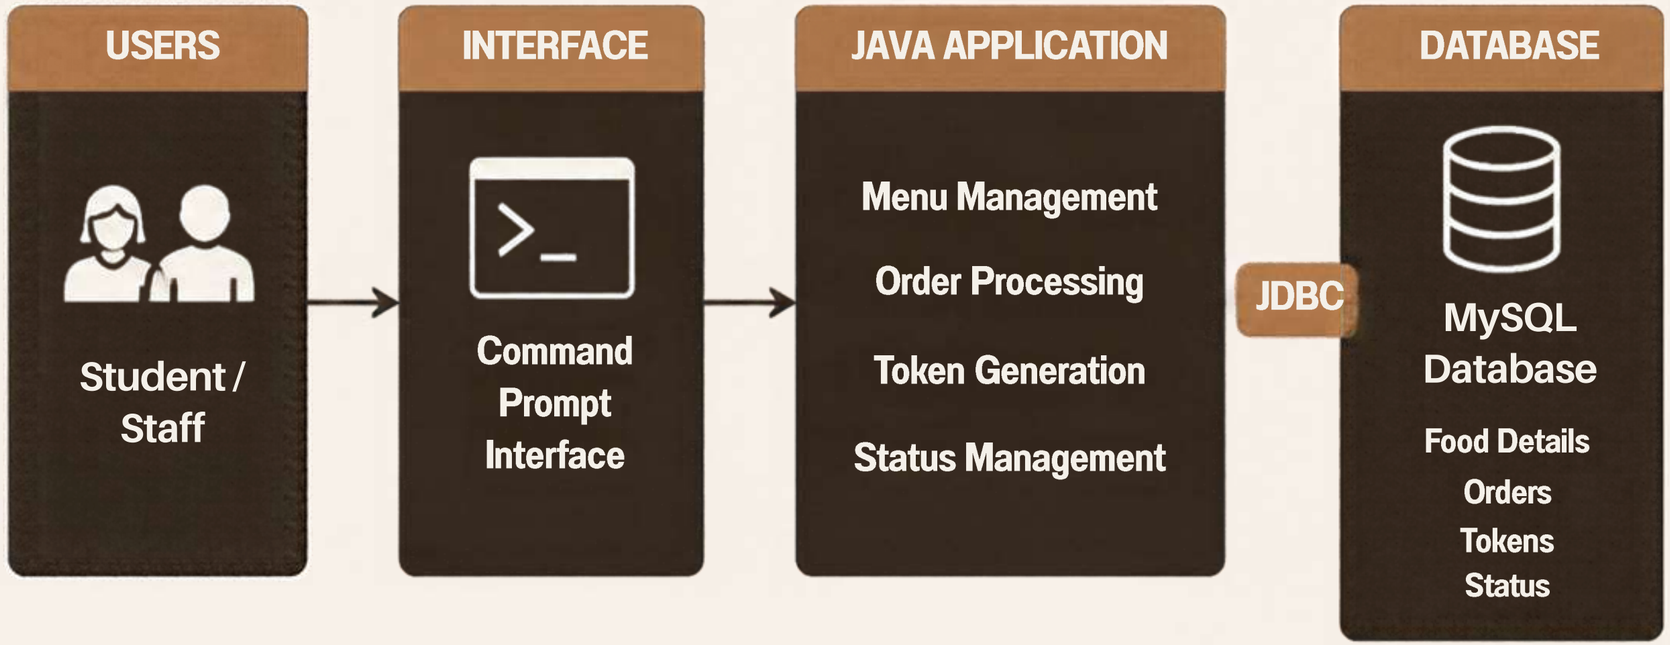

ARCHITECTURE & TECHNOLOGY STACK

Console-based interface for students and staff

Java application handles menu, orders, tokens and status

JDBC connects the application to MySQL

MySQL stores food, orders, tokens and status

TECHNOLOGY STACK

Java | MySQL | JDBC | CMD

MAKING EVERY ORDER MORE EFFICIENT

Reduces unnecessary waiting at food counters

Makes order progress easier to track

Improves coordination between students and staff

Maintains organised, persistent order records

QueueLess

Seamless Ordering. Smarter Service.
